

Product Manager - Cyber Security

Job Description

Are you passionate about solving complex business problems and real world challenges? Do you thrive in a dynamic start-up work environment that constantly pushes you to be the best you can be? Are you ready to work with motivated colleagues and veteran entrepreneurs who strive for excellence in everything they do?

Define the future of Financial Systems by innovating at the juncture of technologies of Blockchain and Big Data. Blockchain is the core of the technology that underpins cryptocurrencies. This “new” financial revolution is changing how any financial instrument like securities; derivatives, etc. are traded and settled in Wall Street and around the world. Blockchain’s mathematical verification of underlying data simplifies audit and regulatory compliance and reduces billions of dollars spent in these functions. Financial institutions are looking to leverage big data solutions as systems of record for risk analysis and decision-making more now than ever before. Come, join this revolution!

If you are looking for an opportunity to join a talented team in a great start-up environment, we would like to talk to you!

Responsibilities

Work in a highly interactive, team-oriented environment

Work closely with customers to identify customer and market needs, define use cases and establish user personas

Understand the platform, services, and features

Own the product roadmap, lead the product feature planning process and work closely with engineering to ensure successful delivery
