

Senior Program Manager

Primary Responsibilities:

To succeed in this role, you must be a thought leader, a driver, and help shape the direction as well as the deliverables for our blockchain strategy. More specifically: You will develop a deep understanding of how customers use distributed ledger technologies as well as compute, storage, database, and networking services in Azure to architect their applications.

You will master working across boundaries, negotiating, and managing conflict.

You will manage complex and ambiguous projects, with executive visibility and many critical dependencies.

Drive rhythm of business activities within the team and across the org to ensure end-to-end success of expansion initiatives.

Work with top engineers across the division to translate the overall model into releases packed with customer value.

Drive the designs and product strategies that will become the benchmark for innovation, and establish the pattern for distributed ledger technology and services in cloud and hybrid scenarios

Knowledge, Skills & Experience:

BS or Master's Degree in Computer Science or a related field

MBA preferred but not required - 8+ years of software development or program management experience

4+ years of experience designing and operating services

4+ years program management, product management, consulting or engineering experience

Demonstrated customer focus and end-to-end thinking across teams and experiences

Highly effective communication and collaboration across teams

Track record of high-quality, self-directed, timely execution, and attention to detail

Technical expertise and ability to communicate, work & build trust with technical teams
